NFL League Superlatives

Week 2026. Best and worst team in every category, grouped by where it lives on the sheets. Top 3 and bottom 3 shown, with the #1 team's supporting numbers. Built from this season's real team data, 32 teams, about 4 games played each.

POWER INDEX

Power Index (Total: Offense + Defense)

Sum of the project's weighted offense and defense power ratings (z-score blends of points, yards/play, EPA, success rate, turnovers, red zone). Higher = better.

BEST	WORST
1. SF +2.51 Off +1.91 · Def +0.60 · VOID +0.181	**1. MIA** -2.03 Off -1.34 · Def -0.69 · VOID -0.161
2. KC +1.98	**2. NO** -1.48
3. SEA +1.92	**3. IND** -1.25

Offensive Power Index

Offense-only rating from the same weighted blend.

BEST	WORST
1. SF +1.91 PPG 30.5 · YPP 7.03 · EPA/play +0.291	**1. MIA** -1.34 PPG 11.5 · YPP 5.10 · EPA/play -0.141
2. BAL +1.44	**2. TB** -1.14
3. KC +1.26	**3. LAC** -1.07

Defensive Power Index

Defense-only rating; sign-flipped so higher is always better.

BEST	WORST
1. MIN +1.86 PA/G 12.8 · YPP allowed 4.88 · EPA/play allowed -0.184	**1. DAL** -1.57 PA/G 28.0 · YPP allowed 6.51 · EPA/play allowed +0.201

MATCHUP LEAKS: TIGHT ENDS & MOBILE QBs

Tight Ends: Fantasy Points Allowed

Yardage allowed to TEs is not tracked in this project; PPR fantasy points allowed to the position is the closest stat. Best = stingiest vs TEs, worst = gives up the most.

BEST	WORST
1. NE 5.9 PPR pts/G to TEs Pass Yds/G allowed 190 · Comp% allowed 61.2% · Sep. allowed 2.98 yds	**1. DET** 28.4 PPR pts/G to TEs Pass Yds/G allowed 304 · Comp% allowed 63.2% · Sep. allowed 3.25 yds

Q = listed Questionable. * = low-confidence baseline. Individual pass rushers and defensive backs are not in the player data, so sacks and interceptions are projected per quarterback from both teams' sack and takeaway rates, not by defender.

NOT RANKED: DATA NOT IN THE PROJECT YET

Passing yards allowed at 0-5 and 10-20 yards: the project does not store pass depth (air yards / pass length) per defense, so these are not ranked without inventing numbers. Adding them means pulling air_yards from the play-by-play in nfl_data_pull.py and bucketing by depth.

3RD DOWN SUCCESS: HELD BACK

Best/worst 3rd-down offense and defense are not ranked here on purpose. The 3rd-down % in nfl_team_matrix.csv currently looks wrong (values run about 5% to 11%, while real NFL 3rd-down rates sit near 30% to 50%): the conversion flag is divided by every play, not just 3rd-down attempts. This report turns the 3rd-down cards on automatically once the matrix values look like real percentages. The fix is in nfl_data_pull.py (restrict to down == 3 before the average).
