NFL WORKHORSE TRACKER

Week 5 · data through Week 4 of 2026 · lead back, top 3 pass-catchers and QB for every team. Descriptive, not a pick: it shows who is being leaned on, who is slipping and what the team does without him.

How to read it. **INJURY** = on the injury report (with what the team scores without him and who absorbs his work). **DECLINE** = his efficiency over the last 3 games fell against his own baseline (this + last season): the data trace of fatigue or a nagging injury. **HEAVY / SPIKE / HIGH PACE** = workload. **HOT** = scoring above what his opportunities should produce (cools off); **COLD** = below (due to pop). **DEPENDENT** = team scores 4+ fewer points a game without him. VS EXP = last-3 fantasy points per game above/below expected from his carries, targets and attempts.
*PROJ columns: the team's production against each defense it has faced, measured against what that defense gives up to everyone else (the opponent's other games, so a game never grades itself), blended toward league average with 3 games of padding, then applied to the next opponent's season averages. It is a stat read of the matchup, not the model's pick.

WATCH LIST - highest-priority flags league-wide

Breece Hall NYJ RB	**INJURY** Out (Quadricep); team -8.7 pts/gm without him (n=2); next man up Braelon Allen **HIGH PACE** 346-touch season pace **DECLINE** RYOE/att +0.5 to -0.1; YPC 4.4 to 3.2 **DEPENDENT** team -8.7 pts/gm without him (n=2)
