VOID RATING

PIT		CLE
18th	LEAGUE RANK	24th
-0.004 (18)	TOTAL VOID	-0.061 (24)
-0.251	NET EPA (MATCHUP)	-0.053
-0.17 (30)	EPA/PLAY (OFF)	-0.06 (22)
-0.13 (27)	NET EFFICIENCY	-0.06 (16)
39.1% (27)	SUCCESS RATE (OFF)	41.5% (21)
66.3% (2)	PASS PLAY %	56.7% (15)
33.7% (31)	RUSH PLAY %	43.3% (18)
-0.026 (20)	OFF VOID	-0.053 (23)
0.022 (9)	DEF VOID	-0.007 (17)
+0.057	NET VOID	

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

4.0 (1)	SEPARATION vs SEPARATION ALLOWED	3.3 (23)

DEEP DIVE

PIT (2-1-0) enters off a win against CIN (30-27). Their offense leaned run-heavy that game and faced heavy pressure. On the season they've been conservative on 4th down (20% go-for-it rate). CLE (2-1-0) enters off a win against CAR (21-18). Their offense leaned run-heavy that game and protected the passer well. On the season they've been situational on 4th down (33% go-for-it rate). By VOID, PIT has rated as the stronger team so far this season (#18 vs #24 league-wide). CLE may have trouble in the passing game here — PIT is averaging 208 pass yards/game against a CLE defense allowing 224 per game.

STAT MISMATCH BREAKDOWN: PIT vs CLE

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

13.4	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	**8.5**

PIT has the real edge on Havoc Rate (Defense) (13.4 vs 8.5) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

-0.0	**OVERALL EFFICIENCY** VOID (Total) (prior)	**-0.1**

PIT has the real overall efficiency edge on VOID (Total) (-0.0 vs -0.1) -- the kind of gap that tends to show up in the final score.

21.4	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	**16.0**

PIT has the real edge on Pass Rush Productivity (PRP) (21.4 vs 16.0) -- if CLE's protection or pass rush can't close this gap, PIT should get what it wants through the air.

72.5	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	**90.7**

CLE has the real edge on Passer Rating (72.5 vs 90.7) -- worth watching PIT's QB play closely if this holds up.

22.7	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	**17.9**

PIT has the real edge in the trenches on Run Stuff Rate (Defense side) (22.7 vs 17.9) -- this game may be settled on the ground, with PIT controlling the line of scrimmage.

INJURY REPORT: PIT vs CLE	
Jamel Dean (CB) – Ankle – Questionable **Rico Dowdle (RB) – Toe – Out** **Michael Pittman (WR) – Foot – Questionable** **Jaylen Warren (RB) – Shoulder – Questionable** **Joey Porter Jr. (CB) – Not injury related - other – Questionable** **Gennings Dunker (G) – Knee – Out**	**Grant Delpit (S) – Shoulder – Questionable** **Teven Jenkins (G) – Back – Out** **Tyson Campbell (CB) – Ankle – Questionable**

	NET VOID	-0.029

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

IND (1-2-0) enters off a win against HOU (19-17). Their offense leaned balanced that game and protected the passer well. On the season they've been situational on 4th down (36% go-for-it rate). WAS (1-2-0) enters off a win against SEA (33-31). Their offense leaned run-heavy that game and faced heavy pressure. On the season they've been conservative on 4th down (27% go-for-it rate). By VOID, WAS has rated as the stronger team so far this season (#20 vs #22 league-wide). IND may have trouble containing the run here — WAS is averaging 133 rush yards/game against a IND defense allowing 142 per game.

STAT MISMATCH BREAKDOWN: IND vs WAS

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.2	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	0.1

WAS has the real overall efficiency edge on EPA/Play Allowed (Defense) (0.2 vs 0.1) -- the kind of gap that tends to show up in the final score.

10.7	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	25.8

WAS has the real edge in the trenches on Run Stuff Rate (Defense side) (10.7 vs 25.8) -- this game may be settled on the ground, with WAS controlling the line of scrimmage.

4.2	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	9.5

WAS has the real edge on Havoc Rate (Defense) (4.2 vs 9.5) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

74.6	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	94.5

WAS has the real edge on Passer Rating (74.6 vs 94.5) -- worth watching IND's QB play closely if this holds up.

81.6	**PASSING & PROTECTION** Pass Block Efficiency (PBE) (prior)	85.3

WAS has the real edge on Pass Block Efficiency (PBE) (81.6 vs 85.3) -- if IND's protection or pass rush can't close this gap, WAS should get what it wants through the air.

INJURY REPORT: IND vs WAS	
Charvarius Ward (CB) – Groin – Questionable **Ashton Dulin (WR) – Ankle – Out** **Alec Pierce (WR) – Heel – Out**	**Frankie Luvu (LB) – Groin – Out** **Sam Cosmi (G) – Concussion – Out** **Nick Cross (S) – Illness – Out** **Chig Okonkwo (TE) – Hamstring – Out** **Jayden Daniels (QB) – Elbow – Out**

VOID RATING

31st	LEAGUE RANK	7th
-0.156 (31)	TOTAL VOID	0.082 (7)
-0.121	NET EPA (MATCHUP)	0.257
-0.07 (23)	EPA/PLAY (OFF)	0.19 (3)
-0.10 (21)	NET EFFICIENCY	0.17 (6)
42.7% (18)	SUCCESS RATE (OFF)	54.3% (2)
59.2% (12)	PASS PLAY %	45.7% (32)
40.8% (21)	RUSH PLAY %	54.3% (1)
-0.097 (28)	OFF VOID	0.044 (9)
-0.059 (27)	DEF VOID	0.038 (7)
	NET VOID	-0.238

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

TEN (0-3-0) enters off a loss against NYG (7-12). Their offense leaned balanced that game and protected the passer well. On the season they've been conservative on 4th down (25% go-for-it rate). BAL (2-1-0) enters off a win against DAL (34-31). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (29% go-for-it rate). By VOID, BAL has rated as the stronger team so far this season (#7 vs #31 league-wide). TEN may have trouble containing the run here — BAL is averaging 168 rush yards/game against a TEN defense allowing 128 per game.

STAT MISMATCH BREAKDOWN: TEN vs BAL

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

-0.2	**OVERALL EFFICIENCY** VOID (Total) (prior)	0.1

BAL has the real overall efficiency edge on VOID (Total) (-0.2 vs 0.1) -- the kind of gap that tends to show up in the final score.

75.4	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	106.2

BAL has the real edge on Passer Rating (75.4 vs 106.2) -- worth watching TEN's QB play closely if this holds up.

16.0	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	19.5

BAL has the real edge in the trenches on Run Stuff Rate (Defense side) (16.0 vs 19.5) -- this game may be settled on the ground, with BAL controlling the line of scrimmage.

15.8	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	17.8

BAL has the real edge on Pass Rush Productivity (PRP) (15.8 vs 17.8) -- if TEN's protection or pass rush can't close this gap, BAL should get what it wants through the air.

9.0	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	9.5

BAL has the real edge on Havoc Rate (Defense) (9.0 vs 9.5) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

INJURY REPORT: TEN vs BAL	
Cordale Flott (CB) – Quadricep – Questionable **Tyjae Spears (RB) – Ankle – Questionable**	**Ronnie Stanley (T) – Toe – Out** **Zay Flowers (WR) – Hamstring – Questionable**

-0.060 (24)	OFF VOID	0.091 (6)
0.003 (11)	DEF VOID	-0.002 (14)
	NET VOID	-0.147

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

NE (1-2-0) enters off a loss against JAX (6-35). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (11% go-for-it rate). BUF (3-0-0) enters off a win against LAC (24-16). Their offense leaned run-heavy that game and faced heavy pressure. On the season they've been conservative on 4th down (29% go-for-it rate). By VOID, BUF has rated as the stronger team so far this season (#6 vs #23 league-wide). NE may have trouble containing the run here — BUF is averaging 157 rush yards/game against a NE defense allowing 109 per game.

STAT MISMATCH BREAKDOWN: NE vs BUF

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

-0.0	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	0.1

NE has the real overall efficiency edge on EPA/Play Allowed (Defense) (-0.0 vs 0.1) -- the kind of gap that tends to show up in the final score.

6.8	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	22.5

BUF has the real edge in the trenches on Run Stuff Rate (Defense side) (6.8 vs 22.5) -- this game may be settled on the ground, with BUF controlling the line of scrimmage.

53.5	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	92.4

BUF has the real edge on Passer Rating (53.5 vs 92.4) -- worth watching NE's QB play closely if this holds up.

19.2	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	22.9

BUF has the real edge on Pass Rush Productivity (PRP) (19.2 vs 22.9) -- if NE's protection or pass rush can't close this gap, BUF should get what it wants through the air.

7.5	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	9.0

BUF has the real edge on Havoc Rate (Defense) (7.5 vs 9.0) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

INJURY REPORT: NE vs BUF	
Dre'Mont Jones (LB) – Shoulder – Out **Brenden Schooler (S) – Back – Out** **Craig Woodson (S) – Shoulder – Questionable** **Eli Raridon (TE) – Thigh – Questionable** **Quintayvious Hutchins (LB) – Knee – Out**	**DJ Moore (WR) – Shoulder – Questionable** **Ed Oliver (DT) – Hip – Questionable** **Keon Coleman (WR) – Ankle – Questionable** **Jordan Hancock (CB) – Hamstring – Out** **T.J. Sanders (DE) – Illness – Out** **Ar'maj Reed-Adams (G) – Elbow – Questionable**

0.011 (16)	OFF VOID	0.126 (2)
-0.055 (26)	DEF VOID	-0.081 (31)
	NET VOID	-0.088

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

NYJ (1-2-0) enters off a loss against DET (24-31). Their offense leaned pass-heavy that game and protected the passer well. On the season they've been situational on 4th down (40% go-for-it rate). CHI (2-1-0) enters off a win against PHI (27-7). Their offense leaned run-heavy that game and protected the passer well. On the season they've been situational on 4th down (42% go-for-it rate). By VOID, CHI has rated as the stronger team so far this season (#10 vs #21 league-wide). NYJ may have trouble containing the run here — CHI is averaging 185 rush yards/game against a NYJ defense allowing 88 per game.

STAT MISMATCH BREAKDOWN: NYJ vs CHI

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

-0.0	**OVERALL EFFICIENCY** VOID (Total) (prior)	0.0

CHI has the real overall efficiency edge on VOID (Total) (-0.0 vs 0.0) -- the kind of gap that tends to show up in the final score.

22.0	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	14.6

CHI has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (22.0 vs 14.6) -- this game may be settled on the ground, with CHI controlling the line of scrimmage.

12.7	**QB ACCURACY & EFFICIENCY** CPOE (prior)	2.8

NYJ has the real edge on CPOE (12.7 vs 2.8) -- worth watching CHI's QB play closely if this holds up.

1.0	**DISRUPTION & TURNOVERS** Turnover Margin (Defense, takeaways) (prior)	5.0

CHI has the real edge on Turnover Margin (Defense, takeaways) (1.0 vs 5.0) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

16.3	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	17.1

CHI has the real edge on Pass Rush Productivity (PRP) (16.3 vs 17.1) -- if NYJ's protection or pass rush can't close this gap, CHI should get what it wants through the air.

INJURY REPORT: NYJ vs CHI	
Minkah Fitzpatrick (S) – Groin – Out Kene Nwangwu (RB) – Back – Doubtful Joseph Ossai (DE) – Foot – Questionable Adonai Mitchell (WR) – Finger – Questionable Francisco Mauigoa (LB) – Quadricep – Out Mason Taylor (TE) – Thumb – Out	Noah Sewell (LB) – Achilles – Out Tyson Bagent (QB) – Concussion – Questionable Caleb Williams (QB) – Hamstring – Out Shemar Turner (DE) – Knee – Out

0.112 (3)	OFF VOID	0.106 (4)
-0.070 (29)	DEF VOID	-0.053 (25)
	NET VOID	-0.010

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

JAX (2-1-0) enters off a win against NE (35-6). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (0% go-for-it rate). CIN (2-1-0) enters off a loss against PIT (27-30). Their offense leaned balanced that game and protected the passer well. On the season they've been conservative on 4th down (17% go-for-it rate). By VOID, these two have rated about evenly so far this season (#11 vs #8 league-wide).

STAT MISMATCH BREAKDOWN: JAX vs CIN

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

13.7	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	22.4

CIN has the real edge in the trenches on Run Stuff Rate (Defense side) (13.7 vs 22.4) -- this game may be settled on the ground, with CIN controlling the line of scrimmage.

90.9	**OVERALL EFFICIENCY** Red Zone TD % (prior)	58.3

JAX has the real overall efficiency edge on Red Zone TD % (90.9 vs 58.3) -- the kind of gap that tends to show up in the final score.

7.8	**QB ACCURACY & EFFICIENCY** CPOE (prior)	2.2

JAX has the real edge on CPOE (7.8 vs 2.2) -- worth watching CIN's QB play closely if this holds up.

82.9	**PASSING & PROTECTION** Pass Block Efficiency (PBE) (prior)	80.6

JAX has the real edge on Pass Block Efficiency (PBE) (82.9 vs 80.6) -- if CIN's protection or pass rush can't close this gap, JAX should get what it wants through the air.

6.0	**DISRUPTION & TURNOVERS** Turnover Margin (Defense, takeaways) (prior)	5.0

JAX has the real edge on Turnover Margin (Defense, takeaways) (6.0 vs 5.0) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

INJURY REPORT: JAX vs CIN

Albert Regis (DT) – Elbow – Doubtful	**B.J. Hill (DT) – Achilles – Doubtful** **Andrei Iosivas (WR) – Thumb – Out**

49.4% (7)	SUCCESS RATE (OFF)	40.0% (25)
61.2% (9)	PASS PLAY %	64.5% (4)
38.8% (24)	RUSH PLAY %	35.5% (29)
0.049 (8)	OFF VOID	-0.094 (26)
-0.114 (32)	DEF VOID	0.091 (4)
	NET VOID	-0.062

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

2.7 (24)	SEPARATION vs SEPARATION ALLOWED	3.3 (25)

DEEP DIVE

DAL (1-2-0) enters off a loss against BAL (31-34). Their offense leaned balanced that game and protected the passer well. On the season they've been conservative on 4th down (11% go-for-it rate). HOU (0-3-0) enters off a loss against IND (17-19). Their offense leaned run-heavy that game and faced heavy pressure. On the season they've been situational on 4th down (50% go-for-it rate). By VOID, HOU has rated as the stronger team so far this season (#17 vs #25 league-wide). DAL may have trouble containing the run here — HOU is averaging 85 rush yards/game against a DAL defense allowing 181 per game.

STAT MISMATCH BREAKDOWN: DAL vs HOU

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.2	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	-0.0

HOU has the real overall efficiency edge on EPA/Play Allowed (Defense) (0.2 vs -0.0) -- the kind of gap that tends to show up in the final score.

5.3	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	10.5

HOU has the real edge on Havoc Rate (Defense) (5.3 vs 10.5) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

12.5	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	20.6

HOU has the real edge on Pass Rush Productivity (PRP) (12.5 vs 20.6) -- if DAL's protection or pass rush can't close this gap, HOU should get what it wants through the air.

18.8	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	25.4

DAL has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (18.8 vs 25.4) -- this game may be settled on the ground, with DAL controlling the line of scrimmage.

102.6	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	79.7

DAL has the real edge on Passer Rating (102.6 vs 79.7) -- worth watching HOU's QB play closely if this holds up.

INJURY REPORT: DAL vs HOU	
Malik Hooker (S) – Forearm – Out **P.J. Locke (S) – Foot – Out** **Cobie Durant (CB) – Hamstring – Out** **DeMarvion Overshown (LB) – Hamstring – Out**	**Jadeveon Clowney (DE) – Knee – Out** **Trent Brown (T) – Knee – Questionable** **M.J. Stewart (S) – Knee – Out** **Nico Collins (WR) – Hamstring – Out** **Jacob Hummel (LB) – Groin – Out** **Ed Ingram (G) – Groin – Out**

VOID RATING

2nd	LEAGUE RANK	30th
0.157 (2)	TOTAL VOID	-0.154 (30)
-0.055	NET EPA (MATCHUP)	-0.176
0.04 (13)	EPA/PLAY (OFF)	-0.04 (18)
-0.08 (19)	NET EFFICIENCY	-0.15 (28)
46.9% (8)	SUCCESS RATE (OFF)	42.9% (17)
61.7% (8)	PASS PLAY %	50.8% (27)
38.3% (25)	RUSH PLAY %	49.2% (6)
0.103 (5)	OFF VOID	-0.094 (26)
0.054 (6)	DEF VOID	-0.061 (28)
+0.311	NET VOID	

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

ARI (1-2-0) enters off a loss against SF (30-36). Their offense leaned balanced that game and protected the passer well. On the season they've been conservative on 4th down (17% go-for-it rate). NYG (2-1-0) enters off a win against TEN (12-7). Their offense leaned run-heavy that game and faced heavy pressure. On the season they've been conservative on 4th down (10% go-for-it rate). By VOID, ARI has rated as the stronger team so far this season (#2 vs #30 league-wide). NYG may have trouble in the passing game here — ARI is averaging 210 pass yards/game against a NYG defense allowing 225 per game.

STAT MISMATCH BREAKDOWN: ARI vs NYG

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.2	**OVERALL EFFICIENCY** VOID (Total) (prior)	-0.2

ARI has the real overall efficiency edge on VOID (Total) (0.2 vs -0.2) -- the kind of gap that tends to show up in the final score.

9.6	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	3.6

ARI has the real edge on Havoc Rate (Defense) (9.6 vs 3.6) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

86.0	**PASSING & PROTECTION** Pass Block Efficiency (PBE) (prior)	78.9

ARI has the real edge on Pass Block Efficiency (PBE) (86.0 vs 78.9) -- if NYG's protection or pass rush can't close this gap, ARI should get what it wants through the air.

18.1	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	9.4

ARI has the real edge in the trenches on Run Stuff Rate (Defense side) (18.1 vs 9.4) -- this game may be settled on the ground, with ARI controlling the line of scrimmage.

3.6	**QB ACCURACY & EFFICIENCY** CPOE (prior)	-2.3

ARI has the real edge on CPOE (3.6 vs -2.3) -- worth watching NYG's QB play closely if this holds up.

INJURY REPORT: ARI vs NYG	
Roy Lopez (DT) – Groin – Questionable Max Melton (CB) – Toe – Questionable Dadrion Taylor-Demerson (S) – Back – Out	Brian Burns (LB) – Ankle – Questionable Deonte Banks (CB) – Calf – Questionable Tyler Nubin (S) – Calf – Questionable

VOID RATING

4th	LEAGUE RANK	29th
0.134 (4)	TOTAL VOID	-0.136 (29)
-0.056	NET EPA (MATCHUP)	0.000
0.01 (15)	EPA/PLAY (OFF)	-0.05 (19)
0.08 (10)	NET EFFICIENCY	-0.12 (26)
45.8% (12)	SUCCESS RATE (OFF)	38.8% (28)
60.4% (11)	PASS PLAY %	56.5% (16)
39.6% (22)	RUSH PLAY %	43.5% (17)
0.043 (10)	OFF VOID	-0.122 (30)
0.091 (4)	DEF VOID	-0.014 (19)
+0.270	NET VOID	

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

LA (1-2-0) enters off a loss against DEN (26-30). Their offense leaned balanced that game and faced heavy pressure. On the season they've been conservative on 4th down (29% go-for-it rate). PHI (2-1-0) enters off a loss against CHI (7-27). Their offense leaned run-heavy that game and protected the passer well. On the season they've been situational on 4th down (40% go-for-it rate). By VOID, LA has rated as the stronger team so far this season (#4 vs #29 league-wide). PHI may have trouble containing the run here — LA is averaging 135 rush yards/game against a PHI defense allowing 128 per game.

STAT MISMATCH BREAKDOWN: LA vs PHI

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.1	**OVERALL EFFICIENCY** VOID (Total) (prior)	**-0.1**

LA has the real overall efficiency edge on VOID (Total) (0.1 vs -0.1) -- the kind of gap that tends to show up in the final score.

10.5	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	**18.9**

LA has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (10.5 vs 18.9) -- this game may be settled on the ground, with LA controlling the line of scrimmage.

4.4	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	**5.9**

PHI has the real edge on Havoc Rate (Defense) (4.4 vs 5.9) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

85.1	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	**75.7**

LA has the real edge on Passer Rating (85.1 vs 75.7) -- worth watching PHI's QB play closely if this holds up.

11.8	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	**9.5**

LA has the real edge on Pass Rush Productivity (PRP) (11.8 vs 9.5) -- if PHI's protection or pass rush can't close this gap, LA should get what it wants through the air.

INJURY REPORT: LA vs PHI	
Colby Parkinson (TE) – Knee – Questionable Puka Nacua (WR) – Hip – Doubtful Kamren Kinchens (S) – Hamstring – Doubtful	Dallas Goedert (TE) – Knee – Out Fred Johnson (T) – Knee – Out Marquise Brown (WR) – Ankle – Out Jonathan Greenard (LB) – Pectoral – Questionable

VOID RATING

GB		TB
27th	LEAGUE RANK	26th
-0.077 (27)	TOTAL VOID	-0.076 (26)
-0.100	NET EPA (MATCHUP)	-0.356
-0.12 (26)	EPA/PLAY (OFF)	-0.19 (32)
-0.19 (29)	NET EFFICIENCY	-0.11 (25)
37.2% (29)	SUCCESS RATE (OFF)	36.7% (30)
73.3% (1)	PASS PLAY %	63.3% (6)
26.7% (32)	RUSH PLAY %	36.7% (27)
-0.040 (21)	OFF VOID	-0.072 (25)
-0.037 (23)	DEF VOID	-0.004 (15)
	NET VOID	-0.001

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

GB (1-2-0) enters off a loss against ATL (14-35). Their offense leaned pass-heavy that game and protected the passer well. On the season they've been situational on 4th down (33% go-for-it rate). TB (0-3-0) enters off a loss against MIN (16-23). Their offense leaned balanced that game and faced heavy pressure. On the season they've been conservative on 4th down (11% go-for-it rate). By VOID, these two have rated about evenly so far this season (#27 vs #26 league-wide).

STAT MISMATCH BREAKDOWN: GB vs TB

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.1	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	-0.1

TB has the real overall efficiency edge on EPA/Play Allowed (Defense) (0.1 vs -0.1) -- the kind of gap that tends to show up in the final score.

-9.1	**QB ACCURACY & EFFICIENCY** CPOE (prior)	1.0

TB has the real edge on CPOE (-9.1 vs 1.0) -- worth watching GB's QB play closely if this holds up.

20.8	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	15.4

TB has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (20.8 vs 15.4) -- this game may be settled on the ground, with TB controlling the line of scrimmage.

11.3	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	10.0

GB has the real edge on Havoc Rate (Defense) (11.3 vs 10.0) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

16.5	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	15.6

GB has the real edge on Pass Rush Productivity (PRP) (16.5 vs 15.6) -- if TB's protection or pass rush can't close this gap, GB should get what it wants through the air.

INJURY REPORT: GB vs TB

Javon Hargrave (DT) – Knee – Questionable **Aaron Banks (G) – Knee – Out** **Zach Bako-Bewele (T) – Knee – Out** **Jayden Reed (WR) – Neck – Out** **Warren Brinson (DT) – Calf – Out** **Anthony Campbell (DT) – Ankle – Questionable**	**Rueben Bain Jr. (LB) – Groin – Out** **Josiah Trotter (LB) – Shoulder – Out**

VOID RATING

MIA		MIN
32nd	LEAGUE RANK	16th
-0.163 (32)	TOTAL VOID	-0.001 (16)
-0.010	NET EPA (MATCHUP)	-0.340
-0.13 (27)	EPA/PLAY (OFF)	-0.12 (25)
-0.29 (32)	NET EFFICIENCY	0.06 (13)
34.7% (31)	SUCCESS RATE (OFF)	30.9% (32)
54.9% (19)	PASS PLAY %	50.3% (28)
45.1% (14)	RUSH PLAY %	49.7% (5)
-0.141 (32)	OFF VOID	-0.138 (31)
-0.022 (21)	DEF VOID	0.137 (1)
	NET VOID	-0.162

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

MIA (0-3-0) enters off a loss against KC (10-24). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (25% go-for-it rate). MIN (3-0-0) enters off a win against TB (23-16). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (20% go-for-it rate). By VOID, MIN has rated as the stronger team so far this season (#16 vs #32 league-wide). MIA may have trouble containing the run here — MIN is averaging 102 rush yards/game against a MIA defense allowing 107 per game.

STAT MISMATCH BREAKDOWN: MIA vs MIN

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.2	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	-0.2

MIN has the real overall efficiency edge on EPA/Play Allowed (Defense) (0.2 vs -0.2) -- the kind of gap that tends to show up in the final score.

8.9	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	27.8

MIN has the real edge on Pass Rush Productivity (PRP) (8.9 vs 27.8) -- if MIA's protection or pass rush can't close this gap, MIN should get what it wants through the air.

9.4	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	14.5

MIN has the real edge on Havoc Rate (Defense) (9.4 vs 14.5) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

23.8	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	19.2

MIA has the real edge in the trenches on Run Stuff Rate (Defense side) (23.8 vs 19.2) -- this game may be settled on the ground, with MIA controlling the line of scrimmage.

-3.0	**QB ACCURACY & EFFICIENCY** CPOE (prior)	-5.6

MIA has the real edge on CPOE (-3.0 vs -5.6) -- worth watching MIN's QB play closely if this holds up.

INJURY REPORT: MIA vs MIN	
Rob Beal Jr. (DE) – Hamstring – Out **Ryan Miller (WR) – Hip – Questionable** **Julius Brents (CB) – Knee – Questionable** **Jaylen Wright (RB) – Stinger – Doubtful** **Caleb Douglas (WR) – Ankle – Out**	**Nick Samac (C) – Knee – Out** **Brett Thorson (P) – Hamstring – Out**

+0.133	NET VOID	

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

KC (3-0-0) enters off a win against MIA (24-10). Their offense leaned run-heavy that game and protected the passer well. On the season they've been situational on 4th down (36% go-for-it rate). LV (3-0-0) enters off a win against NO (35-27). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (22% go-for-it rate). By VOID, KC has rated as the stronger team so far this season (#14 vs #28 league-wide). LV may have trouble containing the run here — KC is averaging 155 rush yards/game against a LV defense allowing 116 per game.

STAT MISMATCH BREAKDOWN: KC vs LV

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.0	**OVERALL EFFICIENCY** VOID (Total) (prior)	**-0.1**

KC has the real overall efficiency edge on VOID (Total) (0.0 vs -0.1) -- the kind of gap that tends to show up in the final score.

11.2	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	**24.8**

LV has the real edge on Pass Rush Productivity (PRP) (11.2 vs 24.8) -- if KC's protection or pass rush can't close this gap, LV should get what it wants through the air.

9.1	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	**13.6**

LV has the real edge on Havoc Rate (Defense) (9.1 vs 13.6) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

16.9	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	**22.4**

KC has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (16.9 vs 22.4) -- this game may be settled on the ground, with KC controlling the line of scrimmage.

-0.1	**QB ACCURACY & EFFICIENCY** CPOE (prior)	**3.5**

LV has the real edge on CPOE (-0.1 vs 3.5) -- worth watching KC's QB play closely if this holds up.

INJURY REPORT: KC vs LV	
Chamarri Conner (S) – Knee – Doubtful **Josh Simmons (T) – Back – Out**	**Kwity Paye (DE) – Illness – Questionable** **Aidan O'Connell (QB) – Not injury related - personal matter – Questionable** **Brock Bowers (TE) – Knee – Questionable** **Treydan Stukes (S) – Concussion – Out**

VOID RATING

LAC	LEAGUE RANK	SEA
19th	LEAGUE RANK	3rd
-0.006 (19)	TOTAL VOID	0.151 (3)
-0.125	NET EPA (MATCHUP)	0.060
-0.19 (31)	EPA/PLAY (OFF)	0.05 (11)
-0.20 (30)	NET EFFICIENCY	0.21 (4)
40.7% (23)	SUCCESS RATE (OFF)	46.1% (11)
54.2% (20)	PASS PLAY %	55.6% (17)
45.8% (13)	RUSH PLAY %	44.4% (16)
-0.042 (22)	OFF VOID	0.021 (13)
0.036 (8)	DEF VOID	0.130 (2)
	NET VOID	-0.157

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

3.0 (15)	SEPARATION vs SEPARATION ALLOWED	2.5 (5)

DEEP DIVE

LAC (0-3-0) enters off a loss against BUF (16-24). Their offense leaned run-heavy that game and faced heavy pressure. On the season they've been conservative on 4th down (17% go-for-it rate). SEA (2-1-0) enters off a loss against WAS (31-33). Their offense leaned balanced that game and protected the passer well. On the season they've been situational on 4th down (40% go-for-it rate). By VOID, SEA has rated as the stronger team so far this season (#3 vs #19 league-wide). LAC may have trouble in the passing game here — SEA is averaging 267 pass yards/game against a LAC defense allowing 233 per game.

STAT MISMATCH BREAKDOWN: LAC vs SEA

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.0	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	-0.2

SEA has the real overall efficiency edge on EPA/Play Allowed (Defense) (0.0 vs -0.2) -- the kind of gap that tends to show up in the final score.

65.8	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	111.5

SEA has the real edge on Passer Rating (65.8 vs 111.5) -- worth watching LAC's QB play closely if this holds up.

77.9	**PASSING & PROTECTION** Pass Block Efficiency (PBE) (prior)	86.0

SEA has the real edge on Pass Block Efficiency (PBE) (77.9 vs 86.0) -- if LAC's protection or pass rush can't close this gap, SEA should get what it wants through the air.

13.6	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	21.5

LAC has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (13.6 vs 21.5) -- this game may be settled on the ground, with LAC controlling the line of scrimmage.

9.0	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	12.4

SEA has the real edge on Havoc Rate (Defense) (9.0 vs 12.4) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

INJURY REPORT: LAC vs SEA	
Dalvin Tomlinson (DT) – Hamstring – Out **Trey Pipkins (T) – Knee – Out** **Kayode Awosika (G) – Fibula – Out** **Elijah Molden (S) – Hamstring – Out** **Trey Lance (QB) – Groin – Questionable** **Charlie Kolar (TE) – Forearm – Out** **Rodney Shelley (CB) – Hamstring – Questionable** **Brenen Thompson (WR) – Quadricep – Out**	**Julian Love (S) – Calf – Out** **Brandon Pili (DT) – Concussion – Questionable** **Ty Okada (S) – Hamstring – Out**

-0.009 (19)	OFF VOID	0.228 (1)
0.118 (3)	DEF VOID	-0.037 (23)
	NET VOID	-0.081

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

DEN (2-1-0) enters off a win against LA (30-26). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (0% go-for-it rate). SF (3-0-0) enters off a win against ARI (36-30). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (0% go-for-it rate). By VOID, SF has rated as the stronger team so far this season (#1 vs #5 league-wide). DEN may have trouble containing the run here — SF is averaging 137 rush yards/game against a DEN defense allowing 145 per game.

STAT MISMATCH BREAKDOWN: DEN vs SF

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

-0.0	**OVERALL EFFICIENCY** VOID (Offense) (prior)	0.2

SF has the real overall efficiency edge on VOID (Offense) (-0.0 vs 0.2) -- the kind of gap that tends to show up in the final score.

74.0	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	133.1

SF has the real edge on Passer Rating (74.0 vs 133.1) -- worth watching DEN's QB play closely if this holds up.

87.4	**PASSING & PROTECTION** Pass Block Efficiency (PBE) (prior)	93.7

SF has the real edge on Pass Block Efficiency (PBE) (87.4 vs 93.7) -- if DEN's protection or pass rush can't close this gap, SF should get what it wants through the air.

14.1	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	9.1

SF has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (14.1 vs 9.1) -- this game may be settled on the ground, with SF controlling the line of scrimmage.

8.5	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	7.3

DEN has the real edge on Havoc Rate (Defense) (8.5 vs 7.3) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

INJURY REPORT: DEN vs SF	
Marvin Mims Jr. (WR) – Foot – Questionable **Jonah Coleman (RB) – Ankle – Out**	**Mike Evans (WR) – Hip – Questionable** **Demarcus Robinson (WR) – Ankle – Out** **Nick Bosa (DE) – Knee – Out** **James Thompson Jr. (DT) – Ankle – Out** **Romello Height (DE) – Hand – Out**

0.072 (7)	OFF VOID	0.018 (15)
-0.022 (21)	DEF VOID	0.001 (12)
+0.031	NET VOID	

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

DEEP DIVE

DET (2-1-0) enters off a win against NYJ (31-24). Their offense leaned run-heavy that game and protected the passer well. On the season they've been situational on 4th down (50% go-for-it rate). CAR (1-2-0) enters off a loss against CLE (18-21). Their offense leaned balanced that game and protected the passer well. On the season they've been conservative on 4th down (27% go-for-it rate). By VOID, DET has rated as the stronger team so far this season (#9 vs #13 league-wide). CAR may have trouble containing the run here — DET is averaging 121 rush yards/game against a CAR defense allowing 194 per game.

STAT MISMATCH BREAKDOWN: DET vs CAR

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

0.1	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	-0.0

CAR has the real overall efficiency edge on EPA/Play Allowed (Defense) (0.1 vs -0.0) -- the kind of gap that tends to show up in the final score.

19.8	**TRENCHES & RUN GAME** Run Stuff Rate (Offense side, lower better) (prior)	13.4

CAR has the real edge in the trenches on Run Stuff Rate (Offense side, lower better) (19.8 vs 13.4) -- this game may be settled on the ground, with CAR controlling the line of scrimmage.

80.3	**PASSING & PROTECTION** Pass Block Efficiency (PBE) (prior)	84.4

CAR has the real edge on Pass Block Efficiency (PBE) (80.3 vs 84.4) -- if DET's protection or pass rush can't close this gap, CAR should get what it wants through the air.

107.1	**QB ACCURACY & EFFICIENCY** Passer Rating (prior)	89.6

DET has the real edge on Passer Rating (107.1 vs 89.6) -- worth watching CAR's QB play closely if this holds up.

10.2	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	9.0

DET has the real edge on Havoc Rate (Defense) (10.2 vs 9.0) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

INJURY REPORT: DET vs CAR	
Ben Bartch (G) – Foot – Out **Thomas Harper (S) – Ankle – Out**	**Nick Scott (S) – Rib – Out** **Devin Lloyd (LB) – Calf – Out** **Claudin Cherelus (LB) – Shoulder – Out** **Xavier Legette (WR) – Knee – Questionable** **Jalen Coker (WR) – Ankle – Questionable**

VOID RATING

12th	LEAGUE RANK	15th
0.039 (12)	TOTAL VOID	0.001 (15)
-0.294	NET EPA (MATCHUP)	0.065
-0.15 (29)	EPA/PLAY (OFF)	0.01 (16)
-0.10 (22)	NET EFFICIENCY	-0.06 (18)
46.6% (10)	SUCCESS RATE (OFF)	46.8% (9)
46.0% (31)	PASS PLAY %	64.0% (5)
54.0% (2)	RUSH PLAY %	36.0% (28)
0.020 (14)	OFF VOID	-0.000 (18)
0.019 (10)	DEF VOID	0.001 (12)
+0.038	NET VOID	

VOID = our own opponent-adjusted efficiency rating (DVOA-style) – positive = better than league avg; needs 2+ games played. EPA = Expected Points Added/play (range ~-0.34 to +0.41, avg ~0.01). NET EPA (MATCHUP) = (this team's off EPA/play x1.5) minus THIS opponent's def EPA/play allowed. EPA/PLAY (OFF) = this team's own raw offensive EPA/play, unmixed with anything else – quality stat #2 (61.0% real win rate), second only to Success Rate. NET EFFICIENCY = this team's own off EPA/play minus its own def EPA/play allowed (not opponent-specific). SUCCESS RATE (OFF) = real share of plays with EPA > 0 – the single best real predictor behind the quality-stat badge (63.4% real win rate). PASS/RUSH PLAY % = this team's real offensive play-mix split. NET VOID = the TOTAL VOID gap between these two teams, shown on the side with the better number – red when that gap size has actually been LOSING more than winning so far (under 0.15, based on one week's real check, small sample).

PPR: 10.3 pts/gm (last 3: 10.3) – vs this defense: #29/32 (12.8 PPR pts/gm allowed to RBs)
PROJ THIS WEEK: 6.4 PPR pts
Kendre Miller – 1.5 tgt/gm (4% share), 6.5 car/gm, 24% snaps
PPR: 6.4 pts/gm (last 3: 6.4) – vs this defense: #29/32 (12.8 PPR pts/gm allowed to RBs)
PROJ THIS WEEK: 4.0 PPR pts
Alvin Kamara – 3.5 tgt/gm (11% share), 9.0 car/gm, 30% snaps
PPR: 6.2 pts/gm (last 3: 6.2) – vs this defense: #29/32 (12.8 PPR pts/gm allowed to RBs)
PROJ THIS WEEK: 3.8 PPR pts

THE FREEBIRDS: ATL vs NO

94.2 (12)	SECONDARY LOCK INDEX	94.3 (9)
ATL PBE: 83.8 (69th pctile – ABOVE AVG) NO PRP: 17.9 (62th pctile – AVERAGE) Net: +0.09 – leans EVEN Different scales -- compare the pctiles, not the raw numbers. Sacks + 0.75×hits/dropback, no hurries (see README)	PASS BLOCK (PBE) vs PASS RUSH (PRP)	NO PBE: 83.2 (59th pctile – AVERAGE) ATL PRP: 16.4 (50th pctile – AVERAGE) Net: +0.23 – leans O-LINE Different scales -- compare the pctiles, not the raw numbers. Sacks + 0.75×hits/dropback, no hurries (see README)

SECONDARY LOCK INDEX = 100 minus real receiving yards allowed per real target faced (nflverse) -- higher = tighter coverage. Real league range this season ~88-96 (avg ~94). Defense-only: no offensive mirror stat exists for coverage tightness. PASS BLOCK (PBE) vs PASS RUSH (PRP) = real indices on different scales (PBE ~0-100, real range ~66-97; PRP a real pressure rate, ~3%-34%) -- compared as z-scores (std devs from real league avg), not raw numbers, to decide LEANS O-LINE / LEANS PASS RUSH / EVEN.

ATL OFFENSE vs NO DEFENSE		
168.3 (29)	PASSING YARDS / GAME	211.7 (16)
5.8 (22)	PASS YARDS / PLAY	5.7 (9)

2.7 (27)	SEPARATION vs SEPARATION ALLOWED	3.1 (17)

DEEP DIVE

ATL (1-2-0) enters off a win against GB (35-14). Their offense leaned run-heavy that game and protected the passer well. On the season they've been conservative on 4th down (10% go-for-it rate). NO (1-2-0) enters off a loss against LV (27-35). Their offense leaned balanced that game and protected the passer well. On the season they've been situational on 4th down (33% go-for-it rate). By VOID, ATL has rated as the stronger team so far this season (#12 vs #15 league-wide). NO may have trouble containing the run here — ATL is averaging 174 rush yards/game against a NO defense allowing 129 per game.

STAT MISMATCH BREAKDOWN: ATL vs NO

Turquoise = the single biggest real, weighted stat gap in that category. "measured" = backtested against your own nfl_game_log.csv results; "prior" = sports-analytics-consensus estimate, not yet backtested.

-0.1	**OVERALL EFFICIENCY** EPA/Play Allowed (Defense) (measured)	0.1

ATL has the real overall efficiency edge on EPA/Play Allowed (Defense) (-0.1 vs 0.1) -- the kind of gap that tends to show up in the final score.

-11.0	**QB ACCURACY & EFFICIENCY** CPOE (prior)	4.5

NO has the real edge on CPOE (-11.0 vs 4.5) -- worth watching ATL's QB play closely if this holds up.

22.9	**TRENCHES & RUN GAME** Run Stuff Rate (Defense side) (prior)	13.8

ATL has the real edge in the trenches on Run Stuff Rate (Defense side) (22.9 vs 13.8) -- this game may be settled on the ground, with ATL controlling the line of scrimmage.

6.6	**DISRUPTION & TURNOVERS** Havoc Rate (Defense) (prior)	7.9

NO has the real edge on Havoc Rate (Defense) (6.6 vs 7.9) -- disruption/turnover numbers are noisier than the rest of this breakdown, so treat this one as real but less reliable.

16.4	**PASSING & PROTECTION** Pass Rush Productivity (PRP) (prior)	17.9

NO has the real edge on Pass Rush Productivity (PRP) (16.4 vs 17.9) -- if ATL's protection or pass rush can't close this gap, NO should get what it wants through the air.

INJURY REPORT: ATL vs NO	
Samson Ebukam (DE) – Hamstring – Out **Billy Bowman Jr. (CB) – Achilles – Questionable**	**Martin Emerson (CB) – Shoulder – Questionable** **Barion Brown (WR) – Hamstring – Out** **Christen Miller (DT) – Toe – Out**

HOW TO READ THIS SHEET

Two separate real scales are used across this sheet -- explained here once instead of repeated under every panel.

CELL COLORS (every panel's live coloring): each real number is compared to the real 2026-season league average for that exact stat. Plain black = within 25% of average (close). **GREEN** / **RED** = 25-55% off average (a real, meaningful signal) -- and beyond 55% off, that same green/red fills the WHOLE CELL (a real outlier). **PURPLE** = real top 3% league-wide (elite), **ORANGE** = real bottom 3% league-wide (one of the worst in the league at this specific stat) -- these two always win out over the %-based steps above, no matter how small or large the gap looks. Direction flips automatically for defense/"allowed" stats, so green (and purple) always means good, red (and orange) always means bad, for whichever side it's on. Tug o' War/Edge Pressure and Pass Block vs Pass Rush use a related but separate 5-tier real percentile system (WEAK/BELOW AVG/AVERAGE/ABOVE AVG/ELITE) -- see their entries below.

POOR / AVERAGE / GOOD below: a simpler 3-tier real scale built just for this glossary, computed fresh every time this PDF is built, from where the real 32 current NFL teams actually fall this season for that exact stat – bottom third of real teams = POOR, middle third = AVERAGE, top third = GOOD (direction-aware, so "lower is better" stats like points allowed flip automatically). These numbers move as the real season plays out, same as every other number on this sheet -- never a fixed, hardcoded cutoff.

THE SIX ADVANCED METRICS -- REAL FORMULAS

EPA / NET EFFICIENCY / NET EPA PER MATCHUP – EPA (Expected Points Added) is nflverse's own real published advanced stat -- how much a single play shifts a team's expected point total, given the down, distance, and field position, not just the raw yards gained. off_efficiency_epa/def_efficiency_epa on this sheet are the real, unmodified average of nflverse's play-by-play epa column for that team's plays, offense and defense (EPA ALLOWED) separately. NET EFFICIENCY is this team's own off EPA/play minus what its defense allows -- one number for whether this team's plays are worth more than its opponents' plays against it. NET EPA PER MATCHUP is the same idea computed live for THIS specific pairing instead of a generic season number.

Real formula: NET EFFICIENCY = off_efficiency_epa – def_efficiency_epa. NET EPA PER MATCHUP = (this team's off_efficiency_epa × 1.5) – the opponent's def_efficiency_epa. Both now render as rows inside the VOID RATING panel at the top of the sheet, not their own separate panel -- moved there per your ask, real numbers/formulas unchanged. The raw off_efficiency_epa number itself (EPA/PLAY (OFF), real quality stat #2 at 61.0%) is also now its own row, right under NET EPA (MATCHUP) -- previously it was only ever shown combined into NET EFFICIENCY/NET EPA, never on its own.

OFFENSE EPA/play (higher is better) – POOR: below -0.1 | AVERAGE: -0.1-0.0 | GOOD: above 0.0 (real avg ~0.0)
DEFENSE EPA/play allowed (lower is better) – GOOD: below -0.0 | AVERAGE: -0.0-0.1 | POOR: above 0.1 (real avg ~0.0)
NET EFFICIENCY (off – def, higher is better) – POOR: below -0.10 | AVERAGE: -0.10-0.08 | GOOD: above 0.08 (real avg ~0.00)

VOID (Value Over Interactive Average) – Our own opponent-adjusted, situational-success efficiency rating -- in the same conceptual family as DVOA, but independently built entirely from free, real nflverse play-by-play (DVOA's own exact formula is proprietary and can't be reproduced). Every qualifying play gets a real situational value based on how much of the yards-to-go it actually gained for that down, with explosive-play bonuses and turnover/touchdown overrides, then each team's raw average is adjusted for the real strength of the opponents it has actually played. Positive = better than league average, for BOTH offense and defense (deliberately different from DVOA's sign convention, so it reads the same way on both sides of the ball).

Real formula: Per play: value = yards_gained ÷ (need_frac[down] × yards_to_go), clipped to [-1.5, 1.5], +0.2/+0.4/+0.6 bonus for 10+/20+/40+ yard gains, forced to ≤-1.5 on a turnover and ≥1.2 on a touchdown. Team VOID = the opponent-adjusted average of that value across all real qualifying plays.

Zero = exactly league average, by construction. No fixed POOR/AVERAGE/GOOD cutoffs are printed here -- only 2 real team-weeks have accumulated enough games (2+, the real gate this stat needs to be mathematically meaningful -- see README.txt) so far this season, too small a real sample to set an honest cutoff. Read it directionally: solidly positive = playing above average, solidly negative = below, near zero = roughly average.

TUG O' WAR (INTERIOR) / EDGE PRESSURE – Real credited pass-rush pressure rate for this team's own defensive front -- interior (NT/DT) for Tug o' War, edge rushers (DE/OLB) for Edge Pressure -- built from real player-attributed sacks and QB hits, personnel-weighted to the actual players on this team's current roster using their own real historical rates. Not tied to a specific opposing O-line (that comparison lives in PASS BLOCK vs PASS RUSH below); this is just how much heat this team's front generates on its own.

Real formula: rate = credited pressure events (sacks + QB hits) ÷ real pass-block snaps faced, for that position group, personnel-weighted to the current roster.

The ELITE/ABOVE AVG/AVERAGE/BELOW AVG/WEAK badge shown on the sheet is a real percentile rank against a historical MULTI-SEASON reference pool (every current team's own last few real seasons) -- ELITE ≥85th pctile, ABOVE AVG 65-85th, AVERAGE 35-65th, BELOW AVG 15-35th, WEAK <15th. That reference pool is a different real dataset than this week's 32 teams, so a plain tercile of this week's rates alone (like the other entries below) would give a different, less accurate answer -- not printed here for that reason. For real context only: this week's 32 real teams range roughly 2%-6% interior (avg ~3.6%) and 3%-8% edge (avg ~5.2%).

PASS BLOCK (PBE) vs PASS RUSH (PRP) – PBE (Pass Block Efficiency) is a real 0-100 index for this team's OWN O-line -- 100 means never pressured. PRP (Pressure Rate Productivity) is a real pressure-forced rate for the OPPOSING defense's pass rush. Both come from the same real sack/QB-hit data as pressure_rate_allowed_pct/forced_pct, just weighted differently (PFF's real published PBE weighting: 1× sacks, 0.75× QB hits). Because they live on genuinely different real scales (PBE ~0-100, PRP a ~3%-34% rate), they're never subtracted directly -- each is converted to a z-score (real standard deviations from this week's real 32-team average) and THOSE are netted, which is what actually decides LEANS O-LINE / LEANS PASS RUSH / EVEN on the sheet.

Real formula: PBE = 100 – [(sacks allowed + 0.75 × QB hits allowed) ÷ dropbacks] × 100. PRP = [(sacks forced + 0.75 × QB hits forced) ÷ dropbacks faced] × 100. Net = z(PBE) – z(PRP); net > 0.15 leans O-LINE, net < -0.15 leans PASS RUSH, else EVEN.

PBE (real, this season, higher is better) – POOR: below 81.2 | AVERAGE: 81.2-83.7 | GOOD: above 83.7 (real avg ~82.8)
PRP (real, this season, higher is better for the defense) – POOR: below 15.9 | AVERAGE: 15.9-19.0 | GOOD: above 19.0 (real avg ~17.0)

SECONDARY LOCK INDEX – A single real number for how tight a defense's coverage has been PER TARGET faced -- isolates coverage tightness independent of how many passes a defense faced (a defense seeing fewer targets doesn't automatically look better or worse). Defense-only: no offensive mirror stat exists for coverage tightness, so this shows once, not split into a crossed offense-vs-defense panel like most of the sheet.

Real formula: Secondary Lock Index = 100 – (real receiving yards allowed ÷ real targets faced).

POOR: below 93.5 | AVERAGE: 93.5-94.2 | GOOD: above 94.2 (real avg ~93.7)

SCORING & OVERALL PRODUCTION

POINTS / GAME (and ALLOWED) – Real points scored/allowed per game. The most basic real box-score number on the sheet, but noisy on its own -- doesn't account for opponent quality, field position, or special-teams/defensive scores mixed in with offense.

OFFENSE – POOR: below 19.1 | AVERAGE: 19.1-26.9 | GOOD: above 26.9 (real avg ~22.9)
DEFENSE (allowed, lower is better) – GOOD: below 20.1 | AVERAGE: 20.1-26.0 | POOR: above 26.0 (real avg ~22.9)

AVG SCORING MARGIN – Real average real point differential per game (this team's points minus the opponent's). A quick real gauge of how competitive this team's games have actually been, not just its record.

POOR: below -5.4 | AVERAGE: -5.4-+2.0 | GOOD: above +2.0 (real avg ~-0.0)

YARDS / GAME (and ALLOWED) – Real total offensive/defensive yardage per game. Correlates with winning but less tightly than EPA/play, since it doesn't weight WHEN or how efficiently those yards came.

OFFENSE – POOR: below 306.0 | AVERAGE: 306.0-338.3 | GOOD: above 338.3 (real avg ~330.6)
DEFENSE (allowed, lower is better) – GOOD: below 317.7 | AVERAGE: 317.7-344.8 | POOR: above 344.8 (real avg ~330.6)

YARDS / DRIVE (and ALLOWED) – Real yards gained/allowed per real offensive drive -- normalizes for pace (a team running more real plays naturally racks up more total yards without necessarily being more efficient per drive).

OFFENSE – POOR: below 28.0 | AVERAGE: 28.0-33.2 | GOOD: above 33.2 (real avg ~31.0)
DEFENSE (allowed, lower is better) – GOOD: below 28.4 | AVERAGE: 28.4-33.2 | POOR: above 33.2 (real avg ~31.0)

YARDS / PLAY (and ALLOWED) – Real yards per offensive/defensive snap -- the classic real efficiency-per-snap number, one level less granular than EPA/play since it ignores down/distance/field position context.

OFFENSE – POOR: below 5.05 | AVERAGE: 5.05-5.56 | GOOD: above 5.56 (real avg ~5.45)
DEFENSE (allowed, lower is better) – GOOD: below 5.14 | AVERAGE: 5.14-5.71 | POOR: above 5.71 (real avg ~5.45)

PLAY-CALLING, PACE & TIME OF POSSESSION

RUSH/PASS YARDS PER GAME (with RUSH/PASS PLAY %) – Real rushing/passing yardage per game, with that side's real share of offensive plays shown in parentheses. The play-% number is a real tendency, not inherently good or bad on its own (a run-heavy team protecting a lead looks the same in this column as a run-heavy team that simply can't throw) -- read the yardage number for production, the % for game plan.

RUSHING YDS/GM – POOR: below 97.7 | AVERAGE: 97.7-117.9 | GOOD: above 117.9 (real avg ~112.8)
RUSHING YDS/GM ALLOWED (lower is better) – GOOD: below 102.7 | AVERAGE: 102.7-118.6 | POOR: above 118.6 (real avg ~112.8)
PASSING YDS/GM – POOR: below 195.1 | AVERAGE: 195.1-237.1 | GOOD: above 237.1 (real avg ~217.8)
PASSING YDS/GM ALLOWED (lower is better) – GOOD: below 204.4 | AVERAGE: 204.4-233.7 | POOR: above 233.7 (real avg ~217.8)

PLAYS / GAME (and FACED) – Real offensive snaps run per game (or defensive snaps faced). Left uncolored/no fixed scale on this sheet by design -- more plays can mean an efficient no-huddle attack OR a defense that can't get off the field, genuinely ambiguous which it is from this number alone.

No fixed scale -- genuinely ambiguous direction (see body). Real context only: this week's 32 real teams run ~52-68 offensive plays/game (avg ~60).

TIME OF POSSESSION (MIN) – Real minutes of possession per game. Same genuine ambiguity as PLAYS/GAME -- controlling the clock can reflect a dominant, efficient offense or just a run-it-out-the-clock game script; no fixed scale is printed for the same reason.

No fixed scale -- genuinely ambiguous direction (see body). Real context only: this week's 32 real teams average ~24-36 min/gm (avg ~30).

DOWN & DISTANCE / SITUATIONAL FOOTBALL

3RD DOWN CONVERSION % (and DEFENSE) – Real share of 3rd-down plays converted for a new set of downs (offense) or allowed (defense). One of the most repeatable real situational-football numbers -- directly extends or ends real drives.

OFFENSE – POOR: below 7.8% | AVERAGE: 7.8%-9.1% | GOOD: above 9.1% (real avg ~8.5%)
DEFENSE (allowed, lower is better) – GOOD: below 8.2% | AVERAGE: 8.2%-8.9% | POOR: above 8.9% (real avg ~8.4%)

4TH DOWN CONVERSION % (and ALLOWED) – Real share of 4th-down attempts converted/allowed. Small real sample for most teams (most 4th downs are punted), so read this alongside 4TH DOWN AGGRESSIVENESS below rather than alone.

OFFENSE – POOR: below 28% | AVERAGE: 28%-67% | GOOD: above 67% (real avg ~49%)
DEFENSE (allowed, lower is better) – GOOD: below 28% | AVERAGE: 28%-76% | POOR: above 76% (real avg ~51%)

AVG TO-GO DISTANCE (3RD DOWN) – Real average yards needed on 3rd down (offense faced, or defense forced). A shorter real distance for the offense means 1st/2nd down were efficient; a longer real distance forced is good defense.

OFFENSE (shorter is better) – GOOD: below 8.3 | AVERAGE: 8.3-8.6 | POOR: above 8.6 (real avg ~8.5)
DEFENSE (longer forced is better) – POOR: below 8.3 | AVERAGE: 8.3-8.6 | GOOD: above 8.6 (real avg ~8.5)

4TH DOWN AGGRESSIVENESS (SEASON) – Real season-long go-for-it rate on 4th down in real go-for-it situations (excludes obvious punt/FG spots). A real coaching-tendency number -- informational, not inherently good or bad (an aggressive team in bad spots isn't automatically smarter than a conservative one in good field position).

No fixed scale -- a real coaching tendency, not a performance grade. Real context only: this week's 32 real teams range roughly 0%-50% (avg ~21%).

RED ZONE TD/SUCCESS % (and ALLOWED) – Real share of red-zone trips that end in a touchdown (offense) or are allowed to (defense). Directly measures whether real scoring chances actually turn into points, separate from just reaching the red zone.

OFFENSE – POOR: below 54.9% | AVERAGE: 54.9%-70.0% | GOOD: above 70.0% (real avg ~61.9%)
DEFENSE (allowed, lower is better) – GOOD: below 59.4% | AVERAGE: 59.4%-70.0% | POOR: above 70.0% (real avg ~62.9%)

FIELD GOAL % – Real field goal conversion rate. Straightforward, but a small real sample for most teams (a handful of kicks per game), so a single miss or make swings this number more than most other stats on the sheet.

real teams cluster too unevenly this early in the season for a meaningful POOR/AVERAGE/GOOD split (a common real pattern for rare-event stats early on) – real avg ~85.1%, real range 60.0% to 100.0%

TURNOVERS, PRESSURE & THE TRENCHES

INTERCEPTIONS THROWN / GAME (and GAINED) – Real interceptions thrown by this team's offense, or gained by this defense, per game. One of the clearest real turnover-margin drivers on the sheet.

OFFENSE (thrown, lower is better) – GOOD: below 0.3 | AVERAGE: 0.3-0.7 | POOR: above 0.7 (real avg ~0.7)
DEFENSE (gained) – POOR: below 0.3 | AVERAGE: 0.3-1.0 | GOOD: above 1.0 (real avg ~0.7)

FUMBLES (LOST vs FORCED) – Real fumbles this team's offense has lost, and real fumbles this team's defense has forced. Fumble recovery itself is famously close to a real coin flip league-wide, so read the FORCED number as the more repeatable real defensive skill; LOST carries more year-to-year randomness.

LOST (offense, lower is better) – GOOD: below 0.3 | AVERAGE: 0.3-0.7 | POOR: above 0.7 (real avg ~0.5)
FORCED (defense) – POOR: below 0.3 | AVERAGE: 0.3-0.7 | GOOD: above 0.7 (real avg ~0.5)

SACKS (ALLOWED vs MADE) – Real sacks this team's O-line has allowed, and real sacks this team's defense has made. A cleaner, more familiar real box-score number than PRESSURE RATE below, but noisier -- pressure without a sack (a QB who escapes or throws it away) doesn't show up here at all.

ALLOWED (offense, lower is better) – GOOD: below 5 | AVERAGE: 5-8 | POOR: above 8 (real avg ~7)
MADE (defense) – POOR: below 6 | AVERAGE: 6-7 | GOOD: above 7 (real avg ~7)

TFL (ALLOWED vs MADE) – Real tackles for loss this team's offense has allowed, and real TFLs this team's defense has made. A good proxy for which team is winning the line of scrimmage on run plays specifically.

ALLOWED (offense, lower is better) – GOOD: below 5.0 | AVERAGE: 5.0-7.0 | POOR: above 7.0 (real avg ~6.3)
MADE (defense) – POOR: below 5.0 | AVERAGE: 5.0-7.7 | GOOD: above 7.7 (real avg ~6.3)

RUN STUFF RATE – Real share of an offense's own run plays stopped at or behind the line of scrimmage, or a defense's real share of opposing run plays stuffed. The cleanest single real number for who's winning the run-blocking/run-defending trench battle on a given play.

OFFENSE (stuffed, lower is better) – GOOD: below 14.8% | AVERAGE: 14.8%-17.2% | POOR: above 17.2% (real avg ~16.3%)
DEFENSE (stuffs made) – POOR: below 13.7% | AVERAGE: 13.7%-18.0% | GOOD: above 18.0% (real avg ~16.3%)

PRESSURE RATE (ALLOWED vs FORCED, SEASON) – Real season-long share of real dropbacks that ended in a sack or QB hit -- allowed by this team's O-line, or forced by this team's pass rush. The team-wide season version of the same real sack/hit data PBE/PRP above use with a different weighting.

ALLOWED (offense, lower is better) – GOOD: below 19.3% | AVERAGE: 19.3%-23.0% | POOR: above 23.0% (real avg ~21.0%)
FORCED (defense) – POOR: below 19.3% | AVERAGE: 19.3%-22.8% | GOOD: above 22.8% (real avg ~20.7%)

HAVOC RATE – Real share of a defense's snaps that produce a TFL, sack, forced fumble, pass breakup, or interception -- a single real number for how often a defense disrupts a play behind or at the line rather than just letting it develop.

POOR: below 8.6% | AVERAGE: 8.6%-9.6% | GOOD: above 9.6% (real avg ~9.0%)

PENALTY YARDS / GAME – Real penalty yardage assessed against this team per game (offense and defense combined). Fewer is better -- self-inflicted real yardage that erases real drive progress or extends an opponent's.

GOOD: below 50.8 | AVERAGE: 50.8-65.8 | POOR: above 65.8 (real avg ~58.0)

QB PASSING METRICS

CPOE (Completion % Over Expected) – Real nflverse advanced stat -- this QB's actual completion rate minus what a league-average arm would be expected to complete on the exact same real throws (accounting for depth, pressure, receiver separation, etc.). Isolates real accuracy/decision-making from a favorable or unfavorable real schedule of throws.

POOR: below -0.1% | AVERAGE: -0.1%-3.6% | GOOD: above 3.6% (real avg ~1.4%)

PASSER RATING – The familiar open-source passer rating formula (completion %, yards/attempt, TD rate, INT rate combined into one real number). Widely recognized but a blunter real instrument than CPOE or EPA -- doesn't account for opponent quality or situational context.

POOR: below 76.1 | AVERAGE: 76.1-93.8 | GOOD: above 93.8 (real avg ~86.2)

TRUE COMPLETION % (vs ALLOWED) – Real completion percentage for this offense's passing attack, or real completion percentage this defense's coverage has allowed.

OFFENSE – POOR: below 57.0% | AVERAGE: 57.0%-63.8% | GOOD: above 63.8% (real avg ~60.4%)
DEFENSE (allowed, lower is better) – GOOD: below 59.5% | AVERAGE: 59.5%-62.1% | POOR: above 62.1% (real avg ~60.7%)

SACK % (PROTECTION vs PASS RUSH) – Real sacks taken as a share of real real dropbacks (offense's protection), or real sacks generated as a share of real dropbacks faced (defense's pass rush).

OFFENSE (protection, lower is better) – GOOD: below 5.1% | AVERAGE: 5.1%-7.2% | POOR: above 7.2% (real avg ~6.0%)
DEFENSE (pass rush) – POOR: below 5.4% | AVERAGE: 5.4%-6.6% | GOOD: above 6.6% (real avg ~5.8%)

YARDS / COMPLETION (vs ALLOWED) – Real yards gained per completed pass, offense and defense. A real proxy for how aggressively (and successfully) an offense is pushing the ball downfield, or how much a defense limits yards after the catch and on deep completions.

OFFENSE – POOR: below 9.6 | AVERAGE: 9.6-10.8 | GOOD: above 10.8 (real avg ~10.5)
DEFENSE (allowed, lower is better) – GOOD: below 9.8 | AVERAGE: 9.8-10.8 | POOR: above 10.8 (real avg ~10.4)

RUSHING METRICS

RYOE / RUSH ATTEMPT – Real NGS (Next Gen Stats) rush yards over expected, per attempt -- how many more (or fewer) yards a real rusher gained than an average back would be expected to on the exact same real blocking/defender positioning. Isolates real runner skill from real O-line push.

POOR: below -0.26 | AVERAGE: -0.26-0.36 | GOOD: above 0.36 (real avg ~0.14)

RUN SUCCESS RATE vs RUN STOP RATE – Real share of an offense's run plays that gain enough yardage to be a situational success (same success-value logic VOID uses), against the real share of opposing run plays a defense stops short of that same bar. The direct offense-vs-defense read on which side is winning the ground game overall, not just at the line (see RUN STUFF RATE above for that narrower cut).

OFFENSE (run success) – POOR: below 38.3% | AVERAGE: 38.3%-43.6% | GOOD: above 43.6% (real avg ~41.7%)
DEFENSE (run stop) – POOR: below 56.4% | AVERAGE: 56.4%-59.9% | GOOD: above 59.9% (real avg ~58.2%)

RECEIVING & COVERAGE METRICS

CATCH % (vs ALLOWED) – Real share of real targets that are caught, for this offense's receivers or against this defense's coverage.

OFFENSE – POOR: below 65.3% | AVERAGE: 65.3%-71.1% | GOOD: above 71.1% (real avg ~67.9%)
DEFENSE (allowed, lower is better) – GOOD: below 66.8% | AVERAGE: 66.8%-70.2% | POOR: above 70.2% (real avg ~68.2%)

YAC / RECEPTION (vs ALLOWED) – Real yards after the catch per reception, for this offense's pass-catchers or allowed by this defense. A real proxy for playmaking-after-the-catch ability (offense) or real tackling-in-space discipline (defense).

OFFENSE – POOR: below 4.5 | AVERAGE: 4.5-5.5 | GOOD: above 5.5 (real avg ~5.1)
DEFENSE (allowed, lower is better) – GOOD: below 4.6 | AVERAGE: 4.6-5.3 | POOR: above 5.3 (real avg ~5.0)

TARGET SEPARATION (vs ALLOWED) – Real average separation (in yards) this offense's receivers create at the time of the throw, or real separation this defense's coverage allows. A cleaner real measure of route-running/coverage skill than catch rate alone, since it's measured independent of whether the pass was actually completed.

OFFENSE – POOR: below 2.8 | AVERAGE: 2.8-3.2 | GOOD: above 3.2 (real avg ~3.0)
DEFENSE (allowed, lower is better) – GOOD: below 2.9 | AVERAGE: 2.9-3.2 | POOR: above 3.2 (real avg ~3.0)

DROP % -- not shown – You asked, and it's genuinely not here: no free/CC-licensed real data source exists for it (PFR-exclusive manual charting only). See README.txt "LICENSING."

OC/DC TENDENCY METRICS (INFORMATIONAL -- NO FIXED SCALE)

PASS/PRESSURE TENDENCY (LAST GAME) & 4TH DOWN AGGRESSIVENESS – PASS RATE (LAST GM), PRESSURE ALLOWED/FORCED (LAST GM), and PASS RATE FACED (LAST GM) are real single-game tendency numbers from each team's most recent real game -- useful for spotting a real recent shift in game plan, but genuinely a mix of real strategy and real game-script noise (a team trailing big late will pass far more than its normal tendency). The OC/DC TENDENCY strips (real historical EPA/success rate vs. man and zone coverage, attributed to each team's actual current coordinator) are the same idea over a longer real historical window.

No fixed poor/avg/good scale for any of these -- real tendencies and single-game snapshots, not performance grades.

KICKING, PUNTING & SPECIAL TEAMS

PUNTS / GAME – Real punts per game. Left with no fixed scale by design -- fewer punts often means a better offense, but can also just mean more 4th-down aggressiveness or a shorter field; genuinely ambiguous on its own, same reasoning as PLAYS/GAME above.

No fixed scale -- genuinely ambiguous direction (see body). Real context only: this week's 32 real teams average ~2-6 punts/gm (avg ~3.6).

AVG PUNT DISTANCE – Real average yards per punt. Straightforwardly higher-is-better real leg strength/hang-time number.

POOR: below 47.2 | AVERAGE: 47.2-48.6 | GOOD: above 48.6 (real avg ~48.1)

PUNT RETURN AVG – Real average yards per punt return. Higher is better, though a real small-sample stat for most teams (a handful of real returns per game).

POOR: below 6.3 | AVERAGE: 6.3-10.8 | GOOD: above 10.8 (real avg ~8.8)

AVG FG DISTANCE (ATTEMPTED) – Real average distance of this team's field goal attempts. Informational context for FIELD GOAL % above (a team attempting longer real kicks will naturally convert a lower raw % even with a strong real leg) rather than a stat with its own clean good/bad direction.

POOR: below 39.3 | AVERAGE: 39.3-44.1 | GOOD: above 44.1 (real avg ~41.0)

SPECIAL TEAMS TDs / GAME – Real special-teams touchdowns (return/blocked-kick scores) per game. Rare, high-variance real events -- most teams sit at 0.00 most weeks, so a nonzero real number here is a genuine outlier, not necessarily a repeatable skill.

real teams cluster too unevenly this early in the season for a meaningful POOR/AVERAGE/GOOD split (a common real pattern for rare-event stats early on) – real avg ~0.01, real range 0.00 to 0.33

FG BLOCKED vs FG BLOCKS FORCED / PUNTS BLOCKED vs PUNT BLOCKS FORCED – Real blocked-kick counts, this team's own kicks blocked and blocks this team's special teams has forced. Genuinely rare real events league-wide (most teams sit at 0.00 all season), so treat any nonzero real number here as a notable outlier rather than a stable trend.

FG BLOCKED (lower is better) – real teams cluster too unevenly this early in the season for a meaningful POOR/AVERAGE/GOOD split (a common real pattern for rare-event stats early on) – real avg ~0.04, real range 0.00 to 0.33
FG BLOCKS FORCED – real teams cluster too unevenly this early in the season for a meaningful POOR/AVERAGE/GOOD split (a common real pattern for rare-event stats early on) – real avg ~0.04, real range 0.00 to 0.33
PUNTS BLOCKED (lower is better) – real teams cluster too unevenly this early in the season for a meaningful POOR/AVERAGE/GOOD split (a common real pattern for rare-event stats early on) – real avg ~0.01, real range 0.00 to 0.33
PUNT BLOCKS FORCED – real teams cluster too unevenly this early in the season for a meaningful POOR/AVERAGE/GOOD split (a common real pattern for rare-event stats early on) – real avg ~0.01, real range 0.00 to 0.33

PLAYER USAGE (QB/RB/WR/TE LISTS)

TARGETS-SHARE/CARRIES-SHARE, SNAP %, PPR PTS/GM, TIME TO THROW – Real per-player usage numbers under THE CAPTAIN/DAWGS/FREEBIRDS/TANKS: real targets or carries per game (with that player's real share of the team total in parentheses), real offensive snap %, real PPR fantasy points per game (with the real last-3-game average alongside it for a recency read), and for QBs, real NGS time-to-throw in seconds. These are single-PLAYER numbers, not team averages, so a fixed poor/avg/good scale isn't printed here -- the real "#N/32 PPR pts/gm allowed to this position" figure shown right next to each player already IS this sheet's real scale for that specific matchup: it tells you directly where the opposing defense ranks against that position, league-wide, in real terms.

DEEP DIVE & INJURY REPORT

DEEP DIVE / INJURY REPORT – DEEP DIVE is real, formulaic plain-language commentary built from the same real numbers shown elsewhere on the sheet (recent results, 4th-down tendency, VOID when available, a real yardage matchup edge) -- not a separate stat, just those real numbers written out in a sentence. INJURY REPORT lists real reported injuries for each team as of this pull, or says plainly when none are reported. Neither has a numeric poor/avg/good scale -- they're real narrative/status panels, not measured stats.
